PRAJWAL MORE

Senior Software Engineer | AI Agents & System Design

@ prajumore76@gmail.com 9527189354 LinkedIn Github X prajwal.wtf

Senior Software Engineer with 5+ years building production AI agents and high-throughput backend systems at Dezy, Flipkart and Cleartrip. I ship LLM agents end to end (tool calling, structured outputs, evals, PII masking, tracing) on well-modelled platforms using LangGraph, RAG, TypeScript, Java, PostgreSQL and AWS.

EXPERIENCE

Senior Software Engineer

Dezy (formerly Smiles.ai)

Jul 2026 – Present

- Shipped **Dezy Assist**, a production AI agent used by 200+ staff across 30+ clinics (1,500+ actions/day), cutting routine ops tasks from ~5 min to under 1 min via tool calling over clinic-scoped APIs, a WhatsApp action loop and pre-model PII masking.
- Built its reliability layer: 25+ permissioned tools, schema-validated outputs, versioned prompts with **eval-gated releases** (300+ cases, 95% pass bar) and per-run Sentry traces; p95 latency under 6 s.
- Architected Dezy's core ops platform (NestJS modules, PostgreSQL source of truth, React 19, AWS CDK/ECS Fargate/RDS), replacing Retool, serverless and a MongoDB/DynamoDB split.
- Led a **zero-downtime migration** via dual-run CDC (MongoDB/DynamoDB → Postgres) with backfills across millions of rows, reconciliation and a single write-back path.
- Modelled domain modules (patients, leads, appointments, treatment plans, payments, tickets, ERP) with clinic-scoped RBAC and approval routing; built durable refund (Cashgram) and messaging (Exotel, Gallabox, WhatsApp) workflows.

Tech Stack: TypeScript, NestJS, React 19, PostgreSQL, Redis, AWS CDK, LLM Agents, Evals

Software Development Engineer - I

Flipkart

Jun 2025 – Jun 2026

- Cut checkout API average latency from 487 ms to 64 ms and p99 event-loop latency from ~20 ms to 2.5 ms by fixing application and event-loop bottlenecks and adding service-level instrumentation.
- Built and operated backend services for Flipkart's checkout ecosystem through Big Billion Days peak traffic.
- Identified an SMS-spoofing vulnerability in the UPI checkout flow and implemented device-level verification to block fraudulent transactions.

Tech Stack: Java, Redis, MySQL, PostgreSQL, Kubernetes (K8s), AWS, GCP, Distributed Systems

Software Development Engineer - I

Cleartrip, Bengaluru

Feb 2023 – Jun 2025

- Built high-throughput REST and RPC services in Java and Vert.x for Cleartrip for Work, the corporate travel platform.
- Led HRMS integrations (Zoho People, PeopleStrong, Darwinbox), automating employee onboarding and eliminating manual data entry for enterprise clients.
- Built a reusable integration framework to sync employee, department and org data across external HRMS systems.

Tech Stack: Java, Vert.x, REST, RPC, Redis, MySQL, Message Queues

EDUCATION

Bachelor of Computer Applications
Pune University
CGPA: 7.8 / 10

SKILLS

Languages
Java | JS/TS | Python

Backend
Node.js | NestJS | Express | Vert.x | REST APIs | RPC | Microservices

AI Systems
LangGraph | LangChain | LangSmith | RAG | LLM Tool Calling | Agentic Workflows | LLM Evals | Structured Outputs | PII Masking | LLM Observability

Databases
PostgreSQL | MongoDB | Redis | ClickHouse

Cloud & Infrastructure
AWS | GCP | Cloudflare | AWS CDK | Docker

PROJECTS

Dear Patient – AI-Powered Digital Nurse

- Built a WhatsApp-first healthcare assistant that extracts structured medication and follow-up instructions from prescriptions and medical documents.
- Developed agentic workflows for medication reminders, patient queries, follow-ups and clinic-specific care journeys using LangGraph, tool calling and longitudinal patient context.
- Designed a multi-tenant backend for clinics covering patients, visits, prescriptions, medications, reminders and operational workflows.
- Deployed production services using Node.js, PostgreSQL, AWS EC2 and Docker.

Tech Stack: TypeScript, Node.js, LangGraph, LLM Tool Calling, RAG, PostgreSQL, AWS EC2, Docker
